MUHAMAD FAHREZA ANDINA RIZKI

Kota Cimahi, Jawa Barat, Indonesia | Portfolio | mfahrezza12@gmail.com | Linkedin

PROFILE

Computer Engineering graduate experienced in architecting scalable web applications, backend infrastructure, and integrating Artificial Intelligence (AI) technologies into operational systems. Proven track record in combining traditional software development with modern machine learning implementations, including LLM integrations and computer vision pipelines, to automate workflows and eliminate operational bottlenecks.

EDUCATION

Universitas Pendidikan Indonesia – **Bandung, Jawa Barat** Sep 2022 – Aug 2026

Bachelor of Computer Engineering – ***GPA 3,64 / 4,00***

Relevant Coursework : Artificial Intelligence, Intelligent Systems & Automation, Probabilistic Robotics, Model Context Protocol (MCP), Data Structures & Algorithms, Software Engineering, Mobile Programming, Web Programming, Object-Oriented Programming, Database Systems, Operating Systems, Linear Algebra, Probability & Statistics.

PROFESSIONAL EXPERIENCE

PT IROSTECH SOLUSI INTELIGEN – **Bandung (Hybrid)** Aug 2025 – Feb 2026

Backend Engineer - *Internship*

- Architected a centralized Free Nutritious Meal (MBG) monitoring web platform in collaboration with BRIN, deploying scalable SQL/NoSQL data hubs for government admins to mitigate operational incidents.
- Integrated an LLM model directly into the backend infrastructure to automate nutritional analysis from food photos, triggering a real-time Discord webhook pipeline for instant anomaly alerts.

PT Winnicode Garuda Teknologi – **Bandung (Remote)** February 2025 – July 2025

Fullstack Engineer - *Internship*

- Built and shipped a comprehensive news portal CMS featuring an integrated analytics dashboard for internal stakeholders and journalists.
- Developed tracking systems allowing journalists to monitor real-time user engagement metrics, aggregating article views, likes, and dislikes to drive content strategy.

PROJECTS (Full lists on Website or Github)

Subarvibe (Thesis) – [link] Feb 2026 – Aug 2026
Fullstack & AI Engineer

- Engineered a zero-to-deploy automated website generation system, tightly coupling a local Qwen3.5-9B LLM orchestrator with a ChromaDB Retrieval-Augmented Generation (RAG) architecture for dynamic content structuring.
- Architected a unified local inference pipeline on hardware-constrained edge environments (12GB VRAM), optimizing memory allocation to autonomously execute both web generation and Flux1-schnell image synthesis via ComfyUI API without out-of-memory (OOM) failures.

AutoClipper – [link] Feb 2026 – Jul 2026
Fullstack & AI Engineer

- Developed an automated Python-based processing pipeline to extract YouTube transcripts and evaluate contextual key moments utilizing LLM analysis in local environment (12GB VRAM).
- Programmed the core logic to automatically trim and render video clips, eliminating manual editing bottlenecks through programmatic intelligence and backend orchestration.

FoodGuard – [link] Aug 2025 – Feb 2026
Backend Engineer

- Architected the backend infrastructure for a school meal nutritional evaluation platform, integrating LLMs for automated food quality checking and monitoring.
- Designed and deployed a low-latency incident logging system utilizing real-time Discord webhooks to trigger instant anomaly alerts and secure food safety reporting.
- Integrated LLM model directly into the backend infrastructure to automate nutritional analysis and anomalies from food photos

Skills & Certifications

Technologies : C++, Java, Python, Flutter, Django, JavaScript, HTML, CSS, React, NextJS, Laravel, PHP, Flask, FastAPI SQL, NoSQL, Git, Docker, Llama-cpp, ComfyUI,

Certifications [full lists here**]: Mikrotik :** MikroTik Certified Network Associate (MTCNA). **Google** : Gemini Application for developer, Spec-driven development, **IBM** : Building AI Agents, Intro To LLM,,**MySkill**: Intro to cloud, API, Back-End & Front - End Fundamental, Web development, QA Fundamental. **Dicoding** : OOP, Introduction Python. **English (PTESOL)** : 574 / 661 (B2 Level)

Language : Indonesian (Native), English (Limited Working Proficiency)

Others

Submited Papers :

[UPI – Thesis] Perancangan Sistem Otomatisasi Pembuatan Website Menggunakan LLM dan RAG Berbasis Website
[SMART-COMP] Rancangan Aplikasi Penghitung Body Mass Index Dengan Auto Planning Workout
[JIKO] Implementation of Base64 Table-Based LSB Steganography Ciphertext Encryption-Decryption on Website Applications (On-Review)
[JTIKOM] Microcontroller and Web-Based Photo Studio Automation System

Honor & Awards :

Bronze Medal Awardee in Mathematic, National Environmental Science Olympiad (NESO) 2022 [link]
